Quality Control Testing Analyst (QA) for Transactional Web Application

About SecurEcom

SecurEcom Consulting Services is a firm specialized in the management of information technology security risks. Our seasoned professionals work with organizations to ensure the protection of their data, their computer applications and their technology infrastructure and to help them manage risks according to their “risk appetite”, that is, the level of risk acceptable for their organization.

In addition, SecurEcom has developed a product (www.indik-dashboard.com) which enables the production of high-performance dashboards that meet management, operational or technology needs. They are produced from the critical assets of an organization and its degree of openness to risk ("risk appetite").

INDIK capitalizes on its power to generate dashboards and its distinctive, intuitive, and progressive approach. INDIK is the ideal tool to simplify, automate and standardize the process of designing, creating and generating a dashboard and its metrics ("KPIs").

Job description

We are looking for a Quality Assurance (QA) Analyst to plan, design, and perform QA testing of our dashboard web product.

You will actively participate in functional and regression testing activities within an Agile-Scrum team. You will establish the test strategies and their execution as well as their documentation with the team.

The tests that will be developed and performed will need to be designed specifically for a transactional web application deployed in cloud mode for large, medium and small businesses.

Your responsibilities :

- Develop test cases (acceptance criteria's) for new features and execute the necessary tests for each Sprint
- Execute functional, integration, regression and performance testing on the web application
- Maintain a record of anomalies, prioritize and track their resolution and produce regular status
- Participate in the product development sessions, specifically during Sprint planning and grooming activities
- Collaborate with the project manager and product owner to develop product specifications
- Participate in the evolution of our quality assurance framework and team
- Create test automation

Required skills

- You have between two (2) and three (3) years of experience in testing and QA analysis of web applications.
- Identify and report root cause of defects and issues found during testing
- Create, modify, execute test cases to verify published business requirements and functional specifications
- Knowledge of good practices in Quality Assurance
- Good analytical and problem-solving skills
- Experience in developing test cases and their implementation especially in an Agile mode
- Basic knowledge of MySQL, HTML and JavaScript
- Good command of and understand spoken and spoken English, read and write

Preferred skills

- Experience with Atlassian Suite (Jira, Confluence)
- Knowledge of automated test development with PHPUnit and Katalon Studio

Please send your resume to: recrutement@securecom.ca

We thank you for your interest in SecurEcom Consulting Services and wish to assure you of the importance we attach to your application.

Please note that only successful applicants will be contacted.
